Precalculus limits review worksheet

Precalculus exam review.

A large collection of exercises from various chapters in the "Precalculus with Limits" textbook is provided. The exercises cover topics such as graphing equations, using the Vertical Line Test to determine functions, sketching lines based on given graphs, and solving systems of linear equations through elimination. Exercises are organized by chapter and exercise number, indicating a comprehensive review or practice set for students. Key skills include: * Graphing functions * Applying the Vertical Line Test * Sketching lines based on given information * Solving systems of linear equations using elimination
